1. Overview

The Omni-Rich System is a decentralized blockchain/hypergraph-based digital monetary protocol designed to provide global baseline financial security via value-based issuance rather than debt-based money creation.

2. Value-Based Issuance (“People Equity”)

Issuance is tied to productive labor, goods/services, and societal needs. Monetary expansion is non-debt-based, aiming for stable purchasing power.

3. Protocol-Level Wage Funding (“Value Pay”)

Baseline wages are issued directly by the protocol. Employers supplement only for premium labor.

4. Demurrage Velocity Mechanism

A portion of unused monthly Value Pay expires after 90 days, ensuring economic velocity.

5. Cooperative Capitalism & 6-4-8 Agenda

Two distinct concepts: cooperative inter-firm collaboration, and labor structure of 6-hour days, 4-day weeks, 8 weeks vacation.

6. Offline-First Architecture

Solar smart cards, NFC/Bluetooth P2P, offline POS, blockchain sync.

7. Universal Homeownership Grant

One-time grant for mortgage-free homeownership.

8. Governance

Decentralized, user-governed protocol with transparent issuance rules.

9. Open Research Questions

Issuance equations, demurrage modeling, governance structures, transition dynamics.
